

Angela McDonald IALD / Principal

"Since we can only visually experience our world with light, we must appreciate the importance of the seamless connection between science and art to create exceptional environments."

" There are two kinds of truth; one that lights the way and the other that warms the heart.

The first is science and the second is art."

New York, NY 10003

Having started designing with light in the theater I remember being drawn to architectural lighting for its technical and aesthetic challenges, but more importantly, the permanence of buildings. For me, every project brings the thrill of knowing today's ideas- born from experience and creativity- will become tangible spaces that will move and motivate others.
